Ontario’s Pupil Foundation grant provides funding for one elementary guidance counsellor for every 5,000 elementary school students. For secondary schools, the province provides funding for one guidance counsellor for every 384 students.

The funding formula states that, “Guidance teachers at the elementary level are those providing guidance primarily to Grade 7 and 8 pupils.”

In 2013, the Ministry of Education introduced a comprehensive approach to career and life planning: Creating Pathways to Success. The policy requires elementary schools to have a process for documenting student learning and career and life planning from kindergarten through grade 12. The process includes reviews with teachers, guidance counsellors and parents. In addition, Creating Pathways to Success describes a strategy to enhance collaboration between school guidance staff, support staff, and other community stakeholders.

ACCESS TO GUIDANCE IN ELEMENTARY SCHOOLS

Creating Pathways to Success identifies guidance counsellors as having a “strategic role” in ensuring the success of career and life planning. However, in this year’s survey, only 14 percent of Ontario’s elementary schools report having a guidance counsellor, and among that small minority, only 10 percent have counsellors that are full-time.

In grades 7 and 8, students make important decisions about secondary school course selection, and often face a range of issues related to adolescence. Because guidance counsellors can interact with students regularly, they have the opportunity to get to know individual students over time, and can provide effective one-on-one support. But only 20 percent of schools with grades 7 and 8 report having guidance counsellors, and the vast majority of these counsellors are part-time.

It would be wise if grade 8 teachers could communicate with high school principals or guidance. With such strict privacy issues, we have less communication of vital student data, especially for at-risk students/families.

Guidance counsellors from the local high school visit twice a year with Grade 8 students to inform them about course selection. Grade 8 students also have the opportunity to spend a morning at the high school to experience what a typical day in high school is like. These practices support the transition to high school.

REGIONAL DIFFERENCES

Across the province, guidance counsellors are much more likely to be found in urban schools. This difference may be partly attributed to the provincial funding formula, which allocates the majority of funding to school boards based on the number of students enrolled. Greater Toronto Area (GTA) elementary schools are approximately 3 times more likely to have a guidance counsellor than other less densely populated regions of the province. (see Figure 1 for comparisons by region).
In contrast to elementary schools, secondary schools in the province are much more likely to have guidance counsellors:

- 99% of secondary schools report having at least one guidance counsellor; and in 88% of these, at least one counsellor is full-time.
- The average ratio of students to guidance counsellors is 391 to 1.
- Secondary schools report that the two areas where guidance counsellors spend most of their time are “supporting social-emotional health and well-being” and “supporting student development and refinement of their Individual Pathway Plans.”

**SOCIAL WORKERS IN SCHOOLS**

The government has aimed for greater integration of youth supports throughout the province. Social workers can be an important component of this support by serving students that require ongoing, intensive social-emotional support and helping to facilitate coordination between school guidance counsellors and external clinical professionals.

In schools where they are regularly scheduled, social workers have more opportunities to get to know school staff and students, and, consequently, to form collaborative relationships with school personnel.

- 75% of secondary schools have at least one regularly scheduled social worker, a steady improvement since 2002 when 46% of schools had them.
- 45% of elementary schools have at least one regularly scheduled social worker, a fairly steady improvement since 2002 when 35% had them.
- 16% of elementary schools in the province have no access to a social worker and no guidance counsellor.
- 28% of elementary schools in northern Ontario have no access to a social worker and no guidance counsellor.

**NEXT STEPS**

Students need a wide range of skills, information and support to realize their long-term goals. The Ministry of Education has developed ambitious policy that outlines how students should be supported to plan for the future, but there is a gap between the policy goals and the resources on the ground. The high ratios of students to guidance counsellors in elementary and secondary schools make it difficult for staff to provide students with the one-on-one attention that they need to both support students’ well-being and help to ensure students can realize their goals for the future.
